💡 Insights Explorer

🎯 Top 6 Product Recommendations

🏆 Launch Champion Loyalty Program

FINDING

22 Champion users have a churn rate of only 4.5% — they are the platform’s most retained and AI-engaged cohort.

ACTION

Introduce early access, dedicated success roles, and community recognition for Champion-tier users.

EXPECTED IMPACT

Reduce already-low 4.5% churn to near-zero and expand Champion cohort by 10–20% via Explorer promotions.

⚠️ At_Risk Re-Engagement Sprint

FINDING

2,159 At_Risk users have used the AI agent but are still predicted to churn — a product-fit gap, not discovery gap.

ACTION

Automated trigger-based emails + in-app prompts for users with churn_probability > 0.7. Surface 'What to build next' guides.

EXPECTED IMPACT

20% recovery = 432 users retained, directly reducing high-risk cohort size.

👻 Ghost Activation Campaign

FINDING

1,860 Ghost users have never used the AI agent and have ≤3 total events — low activation, not product dissatisfaction.

ACTION

Single email + one-click demo canvas to surface AI agent value within 60 seconds.

EXPECTED IMPACT

Convert 15% (~279 users) from Ghost to Explorer/Casual tier, reducing Ghost churn volume.

🚀 Accelerate Explorer → Champion Pipeline

FINDING

217 Explorer users are close to Champion threshold (need ≥2 canvases and AI adoption index ≥0.3).

ACTION

In-product nudge: 'You're 1 canvas away from Champion status.' Show personalized success paths and canvas templates.

EXPECTED IMPACT

Accelerate Champion cohort growth by 10–20% within 90 days, creating a self-reinforcing retention flywheel.

▴ Set Unique Canvases as North Star Activation Metric

FINDING

unique_canvases is the #1 churn predictor (importance 0.1322) — users with ≥2 canvases are dramatically more retained.

ACTION

Instrument canvas creation as the primary onboarding milestone. Show progress bar toward 2-canvas goal in-app.

EXPECTED IMPACT

Even a 10% improvement in canvas creation rate in first week will measurably reduce churn at cohort level.

🚀 Deploy Real-Time Churn Scoring API

FINDING

1,625 high-risk users currently identified, but scoring only happens in batch. Daily scoring enables proactive intervention.

ACTION

Deploy HistGradientBoosting model as live API. Trigger intervention emails when churn_probability crosses 0.7 threshold.

EXPECTED IMPACT

ROC-AUC 0.7814 with 1.54x decile lift means interventions reach the right users — estimated 15–20% reduction in monthly churn.
